Could your **gut microbiome** be at risk?

(The answer might surprise you.)

Your gut microbiome — the beneficial and unwanted microbes living in and on your body — has a big impact on your health, and it's under attack every day. Our modern diet, stress, poor sleep, environmental assaults, and overuse of antibiotics damage the beneficial microbes in your gut, putting your microbiome at risk. In fact, sixty percent (60%) of Americans live in a state of an imbalanced gut, which means unwanted microbes have taken over, causing your gut microbiome to get out of balance.

The good news is that probiotics can help restore gut balance and help optimize your health. Studies show that certain probiotics can reduce unwanted microbes, aid digestion and nutrient absorption, contribute to immune function, help your metabolism, and even help balance or improve your mood.*

Your gut affects **your health...** and **your happiness.**

Gut microbes keep us healthy by training our immune system to fight off invaders. This boosts your body's ability to deal with toxins, allergens, or unwanted microorganisms.

Gut microbes play an important role in the production of neurotransmitters like GABA, Dopamine, and Serotonin. Beneficial microbes have the ability to reduce feelings of stress, nervousness, and tension.

Health and Happiness begin in the gut.

Introducing VitalBiome™ — a revolutionary probiotic supplement with clinically demonstrated ingredients that help improve your health and your mood! Its exceptional formula delivers probiotic strains that help rebalance your gut microbiome and can dramatically improve your Health and Happiness.*

No other product can say the same!

The Right **Choice**

VitalBiome™ gives your gut exactly what it needs to combat life's daily stresses making it the best, probiotic supplement for intensive gut microbiome support.*

The Right **Ingredients**
